Scientific Management Techniques, Inc.

Solving the Manufacturing Skills Shortage/Skills Gap Globally

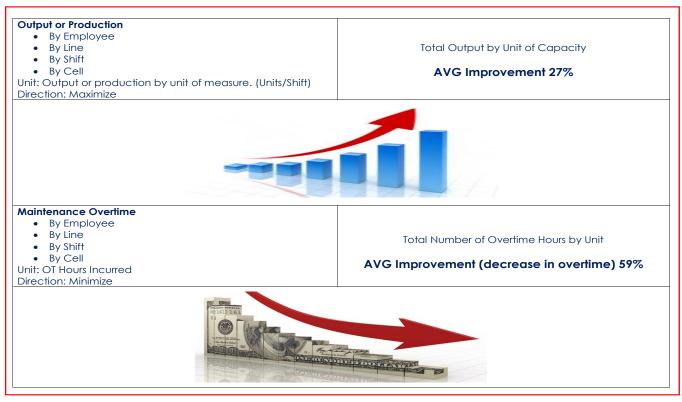

Skill Solutions Deployed by Manufacturers in 44 Countries

Validated Hands-On Skill Assessment Programs and Training Programs

Measuring the Impact of SMT's Skill Solutions:

SCIENTIFIC MANAGEMENT TECHNIQUES, INC.

Lower The Risk And Cost Of Hiring Simplify The Hiring Process

Scientific Management Techniques is the Global Leader in "HANDS-ON" <u>Industrial Skills Assessment Programs</u> and <u>Skills Training Programs</u>. World-Class manufacturing organizations deploy SMT's programs to improve workforce skills and drive performance and profitability in their production facilities.

These programs are unique, validated, proven highly effective in forty-four countries and deliver a Return-On-Investment in excess of 100% the first year of implementation. Powerful Productivity Tools.

COMPETENCY-BASED "MANUFACTURING SKILL ASSESSMENT MACHINES"

This scientific-based, data-driven program simplifies the hiring process. The solution lowers the risk and cost of hiring and aligns the hiring process with industrial lean/TPM initiatives. With the <u>Assessment Machines</u> our clients know the skill set/skill level of each candidate prior to hire.

Identifying and measuring the skills required to **operate**, **maintain** and **troubleshoot** your facility is the single most effective way to ensure a quality hire and drive industrial performance. **Many organizations assess their incumbent workforce and deliver highly targeted training based on the assessment data.**

FIVE HANDS-ON "MANUFACTURING SKILL ASSESSMENT MACHINES"

Mechanical Skills • Electrical Skills • PLC Skills • CNC Skills • Process Control Skills

As the skills shortage grows more acute each year and margin pressures mount it's more critical than ever before to make the right hiring decision. SMT's industrial skills Assessment Machines and Assessment Protocols are used in the hiring process for the selection and evaluation of maintenance mechanics, machine operators, industrial electricians, PLC technicians, electro-mechanical personnel, CNC operation personnel and process control technicians.

- Hire the Right Skill Sets
- Improve Performance & Profitability
- Identify Problem Solving Skills
- Lower the Risk & Cost of Hiring
- Measure Competencies and Instinct
- Minimize Downtime
- Avoid the Bad Hire

- Train the Skills Required to Optimize Performance
- Identify Troubleshooting Ability
- Identify Trainability
- Impact Lean, Six Sigma, & TPM Programs
- Separate Candidates by Skill Level
- Match the Right Person with the Right Job
- Reduce Employee Turnover

If you're hiring without identifying skills in advance you may be accepting risks that can be easily avoided.

Mechanical Skills Assessments Identify troubleshooting ability

<u>The Standard Timing Model</u> (STM) is our Mechanical Skills Assessment Machine. This process identifies and measures pre-existing skill sets/skill levels and is also used to identify mechanical aptitude. The particular assessment used is a function of the position being staffed. The STM delivers a Maintenance Level Assessment used when hiring industrial maintenance professionals and an Operator Level Assessment for hiring experienced operators and identifying aptitude in entry level candidates.

The STM identifies and measures a broad range of mechanical skills. Collectively, the skills identified represent Mechanical Troubleshooting Ability; the ability to analyze and define causes of malfunctions in machinery and solve them quickly and correctly.

PLC Skills Assessments Separate candidates and incumbents by skill level

Our <u>PLC Test Device</u> (PLCTD) is engineered to test and train hardware technicians and PLC programmers. It will identify the troubleshooting skills of industrial equipment maintenance personnel. Much more than a written aptitude test, the PLC Testing Device is hands-on, providing direct feedback from a test panel.

The testing device evaluates job candidates and incumbents in the positions of maintenance personnel, technicians, and programmers responsible for the upkeep and troubleshooting of automated production lines and automated production equipment. It provides a clear indication of candidate's PLC troubleshooting strengths and weaknesses.

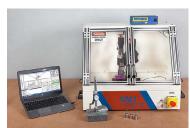

Electrical Skills Assessments Impact Lean, Six Sigma & TPM Initiatives

Our <u>Electrical Skills Test Device</u> (ESTD) is designed to screen and train for industrial electricians and electro-mechanical production positions. The device provides a means of quantitatively screening candidates for industrial electrician positions, for use in evaluating job applicants and as a grading device for training purposes.

The ESTD resembles an industrial control panel as closely as possible in a portable device and was designed in a joint effort by an electrical engineer and a training director who realized the difficulty of evaluating the abilities of electricians.

CNC Skills Assessments Lower the risk and cost of hiring

The <u>CNC Test Device</u> (CNCTD) is designed to screen and train for CNC setup operators with production responsibilities. The device provides a means of quantitatively screening for CNC setup operator positions, for use in evaluating job applicants and as a grading device for training purposes.

The CNC Selection-Evaluation Assessment program takes the uncertainty out of the hiring process. No longer will hiring managers need to **hope** a candidate possesses the skills and experience they represent. The assessment program separates individuals by skill levels, identifying the strongest candidates to drive productivity in your facility.

Process Control Skills Assessment

Avoid the bad hire

The Process Control Test Device (PCTD) is used to screen and train individuals in the area of Process Control Technology and Applications. The device identifies existing skill sets in the fundamental Process Control elements of Pressure, Temperature, Flow and Level. Using the device candidates will be able to configure, tune and control a process loop as it applies to real world process applications. With the PCTD there are both Basic and Advanced level assessments, the specific assessment used is a function of the position being staffed.

The PCTD assessment machine and testing protocols will identify and measure a candidates pre-existing skill sets and pinpoint specific process control training needs.

PARTIAL ASSESSMENT & TRAINING CLIENT LIST

MECHATRONICS TRAINING PROGRAM

"Basic and Advanced Manufacturing Skill Training Prgram"

THESE PROGRAMS TRAIN THE CRITICAL "HARD SKILLS" REQUIRED TO OPERATE, MAINTAIN, AND TROUBLESHOOT A MODERN MANUFACTURING FACILITY.

A HANDS-ON COMPETENCE BASED PROGRAM INCORPORATING THE USE OF OVER 200 TRAINING AIDS THAT REPLICATE REAL-WORLD CONDITIONS IN INDUSTRY. WE TEACH THE THEORY, THEN DIRECTLY APPLY THE THEORY WITH HANDS-ON EXERCISES USING OUR TRAINING AIDS.

THE CURRICULUM IS 100% DEMAND-DRIVEN. WE WORK WITH OUR MANUFACTURING CLIENTS GLOBALLY TO ENSURE THE PROGRAM TRAINS THE SPECIFIC SKILLS REQUIRED TO OPTIMIZE PERFORMANCE. THE CURRICULUM HAS BEEN DESIGNED BY AND FOR INDUSTRIAL OPERATIONS PROFESSIONALS.

THE AMERICAN COUNCIL ON EDUCATION (ACE CREDIT) HAS REVIEWED SMT'S TRAINING CURRICULUM AND RECOMMENDS THE ISSUANCE OF COLLEGE CREDIT FOR SUCCESSFUL COMPLETIONS OF EIGHT INDIVIDUAL SECTIONS OF OUR CURRICULUM.

The curriculum can be characterized as a continuous "needs analysis" of the skills required to operate, maintain, and troubleshoot a modern manufacturing facility. We work closely and continuously with our industrial clients regarding the skills they require to maximize performance. We improve existing units and design new curriculum based on **real-time identified needs.**

"I was introduced to SMT's standard timing model in the early 90's as a plant maintenance manager and used it as a very effective screening tool for hiring. In subsequent roles as plant manager I brought the tool in not only for hiring but also as a training tool for our TPM programs with great effect. Operators were able to see the interaction of cams, gears, drives and take this learning directly to improving their own maintenance and operation in my factories. We also had great success with your electrical testing module, again for both screening and training. I have used SMT for years and this company has great and proven products, training and techniques."

Unilever

"We have been using SMT's tools at Sonoco to help us make better hiring decisions for over 15 years. Within that time frame, the overall technical skills of our entire maintenance organization have increased considerably. Here at Sonoco, we made a conscious decision many years ago to hire better-qualified maintenance employees. These tools not only helped us pick the best candidates, but also established a baseline that all candidates must exceed in order to be hired. This hiring process, applied over that many years, has been a huge benefit to Sonoco."

Sonoco Products Company

Each training unit consists of a student study guide, student test booklet, many power points, hands-on training aid kit, and an instructor guide.

Level One – Basic Mechanics Training Program

Volume 1: Shop Mathematics

Unit 1: Base 10, Decimals, Decimal Equivalents, Percentages

Unit 2: Fractions

Unit 3: Algebraic Expressions, Simple Equations, Ratio, Proportion

Unit 4: Graphs, Charts, Data Handling

Unit 5: Weights, Measures, Metric Conversion
Unit 6: Exponents, Square Roots, Right Triangles

Unit 6: Exponents, Square Roots, Right Unit 7: Angles, Plane Figures, Area

Unit 8: Measurement of Solid Figures, Volume, Intro. To Trig.

Unit 9: Trigonometric Tables

Volume 2: Blueprint Reading & Machine Drawing

Unit 1: Elements of Blueprints and Machine Drawing I

Volume 3: Measurement

Unit 1: Linear Measurement

Volume 4: Hand Tools

Unit 1: Care and Use of Hand Tools

Unit 2: Mechanical Fasteners

Volume 5: Basic Mechanical Components I

Unit 1: Basic Machines

Unit 2: Shafts, Couplings, Pulleys, Belts and Chain Drives

Unit 3: Gears and Gear Ratios Unit 4: Advanced Couplings

Unit 5: Basic Alignment

Volume 6: Bearings & Lubrication

Unit 1: Principles of Bearing Operation, Components, Bearings

Unit 2: Principles of Friction and Lubricants

Volume 7: Basic Mechanical Components II

Unit 1: Levers, Cranks, Linkages, and Springs

Unit 2: Types and Uses of Cams, Timing Adjustments

Unit 3: Use of Elementary Timing Model in Timing Adjustments

Volume 8: Machine Adjustment Fundamentals Using The ATM

Unit 1: Troubleshooting, Problem Solving, and Problem Identification Techniques

Unit 2: Set Up Machine Standards Using the ATM

Unit 3: Problem Solving on Multiple Systems Using the ATM

Volume 8-A: Basic Pneumatics & Hydraulics

Unit 2A: Air Compression, Properties of Air

Unit 2B: Basic Pneumatics, Compressors, and Air Pressure Gauges

Unit 3A: Hydraulic Flow and Control

Volume 9: Electrical Components

Unit 1: Principles of Electricity, AC & DC Circuits

Unit 2: Basic Circuit Components, Switches, and Relays

Unit 3: Digital Multimeter, Basic Measurements

Unit 4: Input and Output Devices

Unit 5: Electrical Schematics

Unit 6: Generators & Transformers

Unit 7: DC Machines

Unit 8: Three-Phase AC & DC Motors

Volume 10: Pump Basics

Unit 1: Pumping Basics

Volume 11: Valve Operation & Types

Unit 1: Valve Operation and Type

Vol 11A: Basic Process Control

Unit 1: Introduction to Process Control

Unit 2: Basic Definitions

Unit 3: Pressure

Unit 4: Temperature

Unit 5: Level

Unit 6: Flow

Unit 7: Analytical Instruments and Terminology

Unit 8: Transmitters

Unit 9: Controllers

Unit 10: Process Control and Control Loops

Unit 11: Control Schemes

Level Two - Advanced Mechanics Training Program

Volume 12: Introduction to Industrial Maintenance

Unit 1: Failure Analysis

Volume 13: Gearbox Maintenance

Unit 1: Gear Maintenance

Volume 14: Bearing Maintenance

Unit 1: Bearing Maintenance

Volume 15: Advanced Pneumatic Fundamentals

Unit 1: Control Components, Pneumatic Drives

Unit 2: Circuit Design

Volume 16: Advanced Hydraulic Fundamentals

Unit 1: Control Components, Hydraulic Drives

Unit 2: Circuit Design

Volume 17: Advanced Electrical

Unit 1: Capacitors

Unit 2: Inductors

Unit 3: Power in AC Circuits

Unit 4: Electrical Troubleshooting Using the ECT

Unit 5: Troubleshooting, AC Motors

Unit 6: Troubleshooting, DC Motors

Volume 18: Pump Maintenance

Unit 1: Pump Maintenance

Volume 19: Introduction to Welding (DISCONTINUED)

Unit 1: Welding Safety

Unit 2: Gas Welding, Cutting, and Heating

Unit 3: Introduction to Arc Welding, MIG - TIG

Volume 20: Machine Shop Practices (DISCONTINUED)

Unit 1: Machine Shop Safety

Unit 2: Hand Tools and Bench Work

Unit 3: Metal Cutting

Unit 4: The Lathe

Unit 5: The Milling Machine

Unit 6: The Drilling Machine

Unit 7: The Grinding Machine

Volume 21: Advanced Machine Adjustment Fundamentals Using the PMS

Unit 1: Troubleshooting, Problem Solving, and Problem Identification Techniques

Unit 2: Set Up Machine Standards Using The Packaging Machine Simulator

Unit 3: Problem Solving on Multiple Systems Using the Packaging Machine Simulator

Volume 22: Ladder Logic

Unit 1: Basic Ladder Logic

Unit 2: Planning and I/O Symbols

Unit 3: Numbering Systems, Codes, and Logic

Unit 4: Symbols and Ladder Logic Basics

Unit 5: Ladder Logic Format

Unit 6: Program Functions

Unit 7: Program Examples

Unit 8: Glossary of Terms

Volume 23: PLC Advanced Electrical

Unit 1: Introduction to the PLC

Unit 2: PLC Programming and Operation

Unit 3: Maintenance and Troubleshooting

VOLUME 24: Advanced Process Control

Unit 1: Process Control- Intro Advanced

Unit 2: Advanced Pressure

Unit 3: Advanced Level

Unit 4: Advanced Flow Measurement

Unit 5: Advanced Temperature

Unit 6: Analytical-PH

Unit 7: Advanced Actuators

Unit 8: Advanced Process Control-Frequency Drives

Unit 9: Heat Exchangers

Unit 10: Hazardous Applications

Unit 11: Flowmeter Installation Unit 12: Instrument Calibration
